## Professional Summary

---

Cybersecurity Analyst | Threat Detection Engineer | Security Researcher

Cybersecurity professional with hands-on experience across threat detection engineering, vulnerability assessment, penetration testing, and security event monitoring. Skilled in analyzing security events, simulating attack scenarios, and developing automation-driven security tooling across network, web, and IoT environments. Ranked in the top 5% globally on TryHackMe through continuous hands-on cybersecurity training and labs.

## Technical Skills

---

**Offensive Security:** Vulnerability Assessment , Penetration Testing, Web Application Security, IoT security

**Threat Detection:** Log Analysis, Suricata Rule Development, SIEM Integration, Event Correlation, ML-Based Anomaly Detection

**Frameworks:** MITRE ATT&CK, OWASP Top 10, NIST Cybersecurity Framework, ISO 27001, ISO 42001

**Cloud & Infrastructure:** AWS (EC2, IAM, VPC, S3), Secure Infrastructure Deployment, Identity & Access Management, Network Segmentation, Docker, Linux Hardening, SSH Security

**Programming:** Python, Bash, PowerShell, Java, C

**Tools:** Wazuh, Splunk ,Suricata, Nmap, Wireshark,Tcpdump,Burp Suite, Metasploit , Gobuster,Hydra, SQLMap, Nessus

## Professional Experience

---

### Soffit Infrastructure Services (P) Ltd

Jun 2026 · Present

#### GRC Intern

Assisted in developing information security policies, standards, and procedures aligned with ISO/IEC 27001.  
Supported information security risk assessments by identifying, documenting, and tracking risks and mitigation actions.  
Maintained risk registers and information security governance documentation to support ongoing risk management activities.  
Contributed to the development and review of AI protection policies, referring to ISO/IEC 42001 for AI governance and security policy documentation.

### InLighnX Global Pvt Ltd

Aug 2025 · Nov 2025

#### Offensive Security Intern

Performed web and network security assessments identifying IDOR vulnerabilities, insecure storage, outdated technologies, and security misconfigurations.  
Conducted vulnerability analysis aligned with OWASP Top 10 across real-world application environments.  
Developed Python automation tools for reconnaissance and vulnerability analysis workflows.  
Identified application logic and infrastructure weaknesses during security assessments.  
Assisted in vulnerability validation, reporting, and security documentation processes.

### CoreXtech IT Services Pvt. Ltd

May 2025 · Aug 2025

#### Cloud Engineer Intern

Deployed and managed AWS cloud infrastructure including EC2, IAM, VPC, and S3 with secure configurations and access controls.  
Configured cloud security measures such as IAM policies, SSH key-based authentication, security groups, and resource scaling mechanisms.  
Supported monitoring, backup management, disaster recovery planning, and cloud resource optimization in collaboration with remote DevOps teams.

## Key Projects

---

### Hybrid Intrusion Detection System for IoT Networks (HIDS)

Engineered a Hybrid IDS integrating signature-based detection with ML-driven anomaly detection through a centralized log correlation pipeline.

Developed custom Suricata rules for detecting DoS and SQL injection attacks within IoT network environments.

Simulated real-world attack scenarios including reconnaissance, denial-of-service, and injection attacks to validate detection effectiveness.

Improved detection coverage by correlating signature-based and anomaly-based alerts, reducing visibility gaps across individual detection mechanisms.

Developed a unified monitoring dashboard providing correlated IDS alerts, source IP analysis, attack timelines, and real-time threat visibility.

### Network Vulnerability Manager (NVM)

Engineered an asynchronous vulnerability assessment framework integrating port discovery, service fingerprinting, and automated CPE-to-CVE correlation for attack surface analysis.

Integrated NVD API 2.0 threat intelligence with asynchronous retrieval, caching, and retry mechanisms to enrich discovered services with CVSS-scored vulnerability data.

Developed automated risk-prioritized reporting workflows to identify exposed assets, correlate vulnerabilities, and support remediation analysis.

### INSIGHTLOG - SIEM-Inspired Log Analysis Framework

Engineered a SIEM-inspired log analysis framework with Apache and Syslog parsing, rule-based detections, burst anomaly analysis, and event correlation capabilities.

Developed a Flask-based monitoring dashboard for alert visualization, timeline analysis, and correlated event tracking to improve threat visibility during investigations.

Implemented automated JSON, CSV, and PDF reporting pipelines with severity classification and security analytics to support SOC-style incident review workflows.

## Security Research & Disclosure

---

Discovered and responsibly disclosed a critical security exposure affecting an Indonesian government platform involving publicly accessible internal application and database resources, leading to risks of sensitive data exposure and unauthorized access.

Conducted security analysis of the exposed infrastructure and authentication components; findings were acknowledged and escalated for remediation by the Indonesian National Cyber and Crypto Agency (BSSN).

## Education

---

### M.Tech in Cybersecurity and Digital Forensics (For Working Professionals)

Indian Institute of Information Technology, Kottayam (IIIT Kottayam) 2026 · Present

### B.Tech in Computer Science & Engineering

St. Thomas College of Engineering & Technology (APJAKTU) Graduated 2026

## Community & Achievements

Top 5% Global Ranking · TryHackMe and 700+ Day Active Streak · TryHackMe

Contributor & Volunteer · Sector21 | CyberRange (3000+ members): Contributed testing insights and technical feedback to the developer of the SIGIL CyberRange platform, covering cybersecurity workflow nodes and automated workflows.

Moderator & Session Speaker · 100 Days of Cybersecurity program

Participant · BSides Conference 2026, Seaside Conference 2025
